SCHULTE R ATTN: JOEL	OTH & ZABEL LLP	GILLAN, RYAN P		
919 THIRD AVENUE NEW YORK, NY 10022			ART UNIT	PAPER NUMBER
			3746	
			DATE MAILED: 06/13/2006	

Please find below and/or attached an Office communication concerning this application or proceeding.

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of internity be available under the provided in a 57 EPH 1180(), no revent, however, may a reply be eithery filled. If NO period for reply is specified above, the maximum dislutory periods will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the sit or remained period for righly are period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the sit or remained period for righly and will expire SIX (6) MONTHS from the mailing date of this communication, even if timely filed, may reduce any sample part from application. See 37 CFR 1.749(). Status 1) Responsive to communication(s) filed on 23 March 2006. 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-8 and 10-20 is/are pending in the application. 4a) Of the above claim(s) is/are allowed. 5) Claim(s) is/are allowed. 6) Claim(s) is/are allowed. 6) Claim(s) is/are allowed. 7) Claim(s) is/are allowed. 8) Claim(s) is/are allowed. 8) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). 3 The act		Application No.	Applicant(s)				
Ryan P. Gillan 3/146 The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-4, 8, 10-14 and 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsieh (6,270,325) in view of Carter (3,652,186). Hsieh teaches an apparatus for a fan motor comprising: a base (30), a cylindrically-shaped bearing housing (431) integrally formed from the base and having a first opening located at a housing end opposite the base and a second opening located at a housing end adjacent to the base (clearly seen in figure 2), having a hollow interior and a first and a second open end (clearly seen in figure 2); a pair of bearings (41 & 43) set in an interior of the bearing housing; a rotational shaft (13) supported by the pair of bearings; and a retainer cap (31) set through an aperture in the base. A stator (22) fixed to an outer periphery of the bearing housing; a rotor (15) fixed to the rotational shaft and positioned to face the stator; and an impeller fixed (10) to the rotational shaft. A spacer (42), cylindrically shaped, is set in the interior of the bearing housing between the pair of bearings. It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate at least one oil groove as a means of keeping the bearings lubricated. An end of the rotational shaft towards the base is spherically shaped (clearly seen in figure 2). One bearing, of the pair of bearings, is a shielded ball bearing (41) and the other is

Application/Control Number: 10/612,275

Art Unit: 3746

a sleeve bearing (43) having a chamfered edge. A magnet of the rotor having a central part offset from a central part of a core of the stator. The stator is nearer to the base than the magnet, which is fixed to the rotor, and thus creates an attraction of the rotor to the stator, in the direction of the base (clearly seen in figure 2); wherein the shield part and the bearing housing are a unitary one-piece element (clearly seen in figure 2).

Page 3

- 3. Hsieh fails to teach a shield part integrally formed on the bearing housing at an end opposite the base and which extends in a radial direction towards the rotational shaft. A hub, to which the rotational shaft is attached, has a cylindrical part, which is inserted into an aperture in the shield part, wherein a clearance gap between the cylindrical part and the shield part is in a labyrinthine shape. The interior of the bearing housing is shielded by the shield part and the retainer cap and the pair of bearings are retained in the bearing housing by contact with the shield part and retainer cap.
- 4. Carter teaches a shield part (54 & 55. See fig. 4) formed on the bearing housing (49) at an end opposite the base, the shield part extending in a radial direction towards the rotational shaft (43) and partially enclosing the first opening of the bearing housing. A hub (42), to which the rotational shaft is attached, has a cylindrical part (clearly seen in figure 4, protruding from the hub, along the shaft) extending into the bearing housing through the first opening and forming a labyrinth-shaped gap with the shield part (clearly seen in figure 4). It would have been obvious to one of ordinary skill in the art at the time of the invention to manufacture the shield part and the bearing housing as integral removing the need for fasteners.

Application/Control Number: 10/612,275

Art Unit: 3746

5. In In re Larson, 144 USPQ 347 (CCPA 1965) in a legally related manner regarding a brake disc and a clamp assembly of Tuttle et al., several parts are rigidly secured together as a single unit. The constituent parts are so combined as to constitute a unitary whole. Webster's New International Dictionary (2md edition) defines "integral," which is synonymous with one-piece, "(2) composed of constituent parts making a whole; composite; integrated." The court ruled that the use of one piece construction instead of the structure disclosed in Tuttle et al. (several parts fastened together) would be merely a matter of obvious engineering choice. See also In re Fridolph, 50 CCPA 745, 89 F.2d 509, 135 USPQ 319.

Page 4

- 6. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Hsieh to incorporate the shield portion of the bearing housing and an aperture receiving a cylindrical portion of the hub as a means of providing a sealed protection for the bearings against debris, without having the seal in direct contact with the shaft. It would also have been obvious to one of ordinary skill in the art at the time of the invention to create a conventional labyrinthine seal between the hub and the shield as a means of reducing leakage of liquid into the bearing housing without the use of separate sealing elements, thereby reducing cost and improving the life of the seal.
- 7. Claims 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsieh in view of Carter and in further view of Obara (6,379,129). Hsieh in view of Carter show the limitations of claim 1, but fail to teach a coil spring interposed between the rotational shaft and the retainer cap and a slide member interposed between the coil spring and the rotational shaft.

Application/Control Number: 10/612,275 Page 5

Art Unit: 3746

Obara teaches a coil spring (106) interposed between the rotational shaft (101) and the hub (108) and a slide member (105a) interposed between the coil spring and the rotational shaft. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Hsieh and Carter to incorporate the coil spring and slide member as a means of advantageously pre-loading the ball bearings (col.1 lines 10-14). Although Obara discloses the coil spring interposed between the hub and the shaft, it will equally serve in preloading the bearing to interpose the spring between the shaft and the retainer cap.

- 9. Claims 6 and 15 rejected under 35 U.S.C. 103(a) as being unpatentable over Hsieh in view of Carter and in further view of Schmider et al. (5,176,509). Hsieh in view of Carter show the limitations of claims 1 and 2, but fail to teach a retainer cap further with at least one engagement claw for snapping onto the base and a magnet of the rotor having a central part offset from a central part of a core of the stator, wherein the rotor is attracted in a direction away from the base.
- 10. Schmider et al. teach a retainer cap (3) with at least one engagement claw (41) for snapping onto the base (40) and a magnet (15) of the rotor having a central part offset from a central part of a core of the stator (10), wherein the rotor is attracted in a direction away from the base. It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the engagement claw into the retainer cap as a means of secure fastening without additional fastening elements or parts. It would also have been obvious to one of ordinary skill in the art at the time of the invention to configure the magnet of the rotor and the stator in such a way as to bias the rotor away

Art Unit: 3746

from the base, thereby reducing some of the stress on the bearings, extending their working life.

Response to Arguments

11. Applicant's arguments filed 3/23/06 have been fully considered but they are not persuasive. Applicant argument that the shield part as taught by Carter is not disclosed as integral, but bolted, to the bearing housing, is not persuasive in view of the case law cited above ruling that it is obvious to make multiple pieces fastened together integral or one-piece. Similarly the Applicant argues that Carter's shield (55) cannot form a "labyrinth shaped gap" with the cylindrical part of the hub because of sleeve (54), which is in between the two. However, as cited above, the sleeve as taught by Carter is also considered part of the "shield" and therefore forms a "labyrinth shaped gap" with the cylindrical part of the hub.

Conclusion

- 12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:
- 13. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 3746

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Ryan P. Gillan whose telephone number is 571-272-

8381. The examiner can normally be reached on 8:00 am - 4:30 pm; Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Timothy Thorpe can be reached on 571-272-4444. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
